Dear Slack Design,

Slack Design is my all-time-favorite design team for tech, so you can imagine my excitement when I saw the **Product Designer** opening at Slack! I first fell in love with Slack Design when researching onboarding flows for my first UX job — Slack's onboarding was the most thoroughly, well-designed, empathetic process I had ever encountered, and opened my eyes to how thoughtful user-centered design could be. I am now a product designer based in NYC.

At my current role at Next Jump, I work on an e-commerce platform serving 70% of the Fortune 1000 called Perks at Work. I work on the platform's UX and UI, building and prototyping new features and products as well as revamping our older systems. With over 70 million employees in our system, my work and design decisions must be informed by the user, business needs, and technical constraints. I work closely with product managers, engineers, and business teams to achieve this. I use my background in computer science to design scalable, responsive screens and work closely with engineers to fine tune the details.

While I worked for a startup called StartupTree as their sole product designer, I worked a variety of projects on multiple platforms. Among these were a redesigned web platform to elevate the user experience and upgrade the mobile responsiveness and their mobile app. A few of the the modules I worked on were 1) their messaging system for mentorship 2) an end-to-end competition hosting platform and 3) their onboarding process (during which I researched Slack's onboarding heavily!).

As a UX Design Intern at FactSet, I worked on their design systems on the Visual Design team, collaborating closely with the larger UX department as well as frontend engineers. I was primarily responsible with creating the UI component library to be used internally for the design team. Working on this project gave me experience working on a large design team, and I became familiar with how to create scalable and accessible designs by studying design specifications of both our internal design systems and also the systems at other companies.

Slack Design has always been a large inspiration for my design journey personally, and I can't wait to see how Slack Design continues to evolve. I hope this letter finds you well, and look forward to hearing back! Thank you for your consideration.

All the best,

Cindy Wang
